Professional Profile

🚀 **IT professional transitioning to Full Stack Development.** More than 20 years in IT (support, infrastructure, and troubleshooting). I am currently deepening my knowledge in Python, JavaScript, HTML/CSS, and web development. I specialize in optimizing processes, reducing MTTR (Mean Time to Resolution), and increasing FCR (First Contact Resolution). I have a continuous learning mindset, strong problem-solving ability, and a strong focus on customer service excellence.

Objective

💡 **I currently work in the Service Desk area,** while strengthening my skills in **Python, task automation, data analysis, and artificial intelligence** through courses on **SoloLearn, Ultimatix, and Udemy**, as well as training in AI tools such as **Claude**. My goal is to apply this knowledge in projects involving **automation, process optimization, and innovative solutions**, contributing with efficiency, organization, and continuous learning. I am looking for a **chance to prove myself** by demonstrating my ability to adapt, solve problems logically, and deliver real value in technology environments.

Professional Experience

Service Desk Technician

March 5, 2026 - Present

Tata Consultancy Services (TCS) - CMPC Operation

- Handling incidents and user requests in the CMPC operation through the Service Desk.
- Monitoring, prioritizing, and closing tickets with a focus on resolution time and customer support.
- Support for operating systems, connectivity, peripherals, and corporate applications.
- Collaboration with support teams to resolve issues efficiently and document them properly.

Service Desk Technician

2024 - February 29, 2026

Atos - Enel Operation

- Reduced MTTR for common incidents by standardizing diagnostic scripts and resolution guides.
- Increased FCR by documenting reusable troubleshooting steps and guiding users during support interactions.
- Support for operating systems, office packages, connectivity, and peripherals.
- Ticket logging and follow-up until full closure.

Technical Support Specialist

January 2003 - December 2017

Petróleo de Venezuela C.A. - Anaco

- Resolved hardware, software, and local network incidents, prioritizing the rapid restoration of operations.
- Implemented preventive maintenance routines that reduced recurring failures and downtime.
- Provided on-site and remote technical support to company users.
- Managed IT inventory and asset control.

Academic Background

Python - Full Stack (EBAC - British School of Creative Arts and Technology) 2024 - 2026

Web development with Python, JavaScript, HTML, CSS, React, and databases.

Computer Technician (integrated with secondary education) 1994

Isaac Newton University Institute of Technology

Core Skills

Technical Support

Service Desk | Remote/On-site Support | Windows | Linux | macOS | Troubleshooting | Preventive Maintenance | Asset Inventory

Networks & Infrastructure

Local Networks | Connectivity | Network Diagnosis | Hardware | Peripherals

Frontend Development

HTML5 | CSS3 | JavaScript (ES6+) | React | jQuery | Bootstrap | SASS | LESS | Grunt | Gulp | DOM | Responsive Design | Git | GitHub

Backend & Databases

Python | SQL | REST APIs | JSON | Databases | Python Automation | Generative AI | Prompt Engineering | Claude | ChatGPT | Data Analysis

Soft Skills

Clear Communication | Teamwork | Proactivity | Resilience | Efficiency Focus | Fast Learning | Prioritization

Languages

Spanish (Native) | Portuguese (Intermediate) | English (Intermediate)

Development Projects

🎬 Professional Landing Page

Tech Stack: HTML5, CSS3, JavaScript. Modern and responsive landing page with a professional design. Interface optimized for conversion.

View Demo | GitHub

🚙 jQuery Car Gallery

Tech Stack: jQuery, JavaScript, HTML5, CSS3. Interactive car gallery built with jQuery plugins. Modern interface with effects and animations.

View Demo | GitHub

🎨 Advanced SASS Project

Tech Stack: SASS, CSS3, HTML5. Practical SASS exercise featuring variables, mixins, extends, and modular structure. Automated compilation.

View Demo | GitHub

⚙️ Raffle with Grunt

Tech Stack: Grunt, JavaScript, Node.js. Raffle application with Grunt automation. Minification, concatenation, and asset optimization.

View Demo | GitHub

📱 Responsive Bootstrap Project

Tech Stack: Bootstrap, HTML5, CSS3, JavaScript. Responsive application using the Bootstrap framework. Grid system and modern components.

View Demo | GitHub

Certificates

Python Developer – SoloLearn (2026)

Introduction to SQL – SoloLearn (2024)

Introduction to CSS – SoloLearn (2023)

Introduction to HTML – SoloLearn (2023)

Introduction to Python – SoloLearn (2023)

JavaScript Intermediate – SoloLearn (2023)

JavaScript – SoloLearn (2023)

React + Redux – SoloLearn (2023)
